**B.TECH**  
**PEMT 5305**

**Sixth Semester (Back) Examination – 2013**  
**COMPOSITE MATERIALS(NEW)**  
**BRANCH : MME**  
**Time: 3 Hours**  
**Max marks: 70**

**Answer Question No.1 which is compulsory and any five from the rest.**  
**The figures in the right hand margin indicate marks.**

- Q1 Answer the following questions: (2 x 10)
- What are the advantages of metal matrix composites over monolithic metals?
  - Why does a multifilamentary superconducting composite have a higher ductility compared to monolithic intermetallic compound,  $Nb_3Sn$ ?
  - Show and explain the variation of specific volume with temperature in a crystalline material and a glass.
  - Explain briefly the effect of the difference in the coefficients of thermal expansion,  $\alpha$ , between the matrix and the reinforcement on the mechanical behaviour of CMCs
  - Distinguish between thermosetting and thermoplastic polymers.
  - Explain with diagram the effect of silane coupling agent on interfacial behaviour of glass fibre reinforced epoxies in presence of water.
  - Alumina whiskers (density =  $3.8 \text{ g/cm}^3$ ) are incorporated in a resin matrix (density =  $1.3 \text{ g/cm}^3$ ). What is the density of the composite? Take volume fraction of fibres,  $V_f = 0.35$ .
  - Give a classification of composite materials based on the reinforcements and based on the matrix.
  - What is the difference in structure between High Density Polyethylene (HDPE) and Low density Polyethylene (LDPE)?
  - Why is yttria added to zirconia in zirconia toughened alumina?
- Q2 a) Explain the production route of Aramid fibres. Describe the structure and characteristics of Aramid fibres. (5)
- b) Explain briefly the different methods for measuring interfacial (5)

bond strength of composites.

- Q3 a) Explain with suitable sketches the different liquid state processing methods for producing metal matrix composites. (5)
- b) Explain the production of in situ metal matrix composite by unidirectional solidification. (5)
- Q4 Explain the different fabrication processes and mechanical properties of dense carbon-carbon composites. (10)
- Q5 a) Discuss in detail the physical and mechanical properties of metal matrix composites. (5)
- b) Discuss the importance and the characteristics of aluminium matrix composites reinforced with silicon carbide particles. (5)
- Q6 a) Explain with suitable sketches the matrix transfer moulding method of processing CMCs. (5)
- b) Explain the sol-gel processing of CMCs with the help of flow sheets. (5)
- Q7 a) Briefly explain the different toughening mechanisms operative in a composite. (5)
- b) Explain with suitable sketches the filament winding method of producing polymer matrix composites. (5)
- Q8
- a) Explain the different moulding methods of fabricating polymer matrix composites. (5)
- b) Explain the processing and properties of PEEK matrix composites. (5)
