**GIET UNIVERSITY, GUNUPUR – 765022**  
 B. Tech (Fifth Semester – Regular) Examinations, December – 2022  
**BPCBT5030 – Bio-Chemical Reaction Engineering**  
 (Biotechnology)

Time: 3 hrs

Maximum: 70 Marks

**Answer ALL Questions**

**The figures in the right hand margin indicate marks.**

**PART – A: (Multiple Choice Questions)**

**(1 x 10 =10 Marks)**

**Q.1. Answer ALL questions**

[CO#] [PO#]

- |   |                                 |     |     |
|---|---------------------------------|-----|-----|
| a. Filtration is a ____ operation   |                                 | CO1 | PO1 |
| (i) Solid-liquid  | (ii) Liquid-liquid              |     |     |
| (iii) Liquid-gas  | (iv) Gas-gas                    |     |     |
| b. Absorption is a ____ operation   |                                 | CO1 | PO1 |
| (v) Solid-liquid  | (vi) Liquid-liquid              |     |     |
| (vii) Liquid-gas  | (viii) Gas-gas                  |     |     |
| c. First order reaction rate constant has the unit of   |                                 | CO2 | PO1 |
| (i) time  | (ii) $\text{time}^{-1}$         |     |     |
| (iii) lit/ time. mol  | (iv) mole.time/lit              |     |     |
| d. For first order reaction the PFR is suitable for a particular conversion due to  |                                 | CO3 | PO2 |
| (i) Require less time   | (ii) Require less volume        |     |     |
| (iii) Both (i)&(ii)   | (iv) None of these              |     |     |
| e. According to Transition state theory, reaction rate constant is proportional with temperature as   |                                 | CO2 | PO1 |
| (i) $e^{(-E/RT)}$   | (ii) $T^{0.5}e^{(-E/RT)}$       |     |     |
| (iii) $T e^{(-E/RT)}$   | (iv) None of these              |     |     |
| f. Integral analysis method is used to evaluate   |                                 | CO4 | PO1 |
| (i) Reaction rate   | (ii) Michaelis Menton constants |     |     |
| (iii) Frequency factor  | (iv) None of these              |     |     |
| g. For small conversion in autocatalytic reaction the best reactor is   |                                 | CO3 | PO1 |
| (i) PFR   | (ii) CSTR                       |     |     |
| (iii) Recycle reactor   | (iv) None of these              |     |     |
| h. If two CSTR connected in series are replaced by a single CSTR of same volume, the conversion of single CSTR will be ____ than previous set up. |                                 | CO3 | PO2 |
| (i) greater   | (ii) less                       |     |     |
| (iii) can't say   |                                 |     |     |
| i. Line weaver Burk method is used to evaluate  |                                 | CO4 | PO1 |
| (v) Reaction rate   | (vi) Michaelis Menton constants |     |     |
| (vii) Frequency factor  | (viii) None of these            |     |     |
| j. Doubling time of cell growth is  |                                 | CO4 | PO1 |
| (i) $0.693/\mu$   | (ii) $0.693 \times \mu$         |     |     |
| (iii) $\mu/0.693$   | (iv) $0.693/\mu$                |     |     |

**PART – B: (Short Answer Questions)**

**(2 x 10 = 20 Marks)**

**Q.2. Answer ALL questions**

[CO#] [PO#]

- |   |  |     |     |
|---|--|-----|-----|
| a. Define excess reactants and limiting reactant. |  | CO1 | PO1 |
| b. Define standard heat of reaction.              |  | CO1 | PO1 |

c. What are recycling and bypassing?	CO1	PO1
d. Define absolute and molal humidity.	CO1	PO1
e. Define space time and space velocity.	CO2	PO1
f. Write the significance of recycle ratio in recycle reactor.	CO3	PO1
g. Write the steps of fermentation process	CO4	PO1
h. Write the methods of maintaining high concentration of reactant.	CO3	PO1
i. Define turn over number	CO4	PO1
j. Mention the factors affecting the enzyme activity.	CO4	PO1

**PART – C: (Long Answer Questions)**

**(10 x 4 = 40 Marks)**

Answer ALL questions

- |   |       |      |      |
|---|-------|------|------|
|   | Marks | CO # | PO # |
| 3.a. Calculate the amount of heat required for a gas mixture of 100 Kmole consisting of 30% oxygen and 70% nitrogen (by volume), to raise the temperature from 200 to 300°C. $C_p = a + bT$ , KJ/Kmole °K | 10    | CO1  | PO3  |

Component	a	$b \times 10^3$
O <sub>2</sub>	26.0	12.0
N <sub>2</sub>	24.0	63.0

(OR)

- |   |    |     |     |
|---|----|-----|-----|
| b. Explain the volume comparison of CSTR and PFR with the help of $1/(-r_A)$ vs $X_A$ plot, for +ve, 0 and -ve order reaction.                            | 10 | CO3 | PO2 |
| 4.a. $A \xrightarrow{K_1} R \xrightarrow{K_2} S$ , Derive expressions for $C_A$ , $C_R$ and $C_S$ by considering uni-molecular type first order reaction. | 10 | CO2 | PO2 |

(OR)

- |  |    |     |     |
|--|----|-----|-----|
| b. Explain the use of Psychrometric chart with neat sketch.  | 10 | CO1 | PO2 |
| 5.a. A gaseous feed of pure A (1 mol/liter) enters a plug flow reactor (2 liters) and reacts as follows: $2A \rightarrow R$ , $-r_A = 0.05 C_A^2$ , mol/liter. sec. Find what feed rate (liter/min) will give an outlet concentration $C_A = 0.5$ mol/liter. | 5  | CO2 | PO3 |

- |  |   |     |     |
|--|---|-----|-----|
| b. Derive the performance equation for plug flow reactor | 5 | CO3 | PO2 |
|--|---|-----|-----|

(OR)

- |  |   |     |     |
|--|---|-----|-----|
| c. A gaseous feed of pure A (1 mol/liter) enters a mixed flow reactor (2 liters) and reacts as follows: $A \rightarrow R$ , $-r_A = 0.05 C_A$ , mol/liter. sec. Find what feed rate (liter/min) will give an outlet concentration $C_A = 0.6$ mol/liter. | 5 | CO3 | PO3 |
|--|---|-----|-----|

- |   |   |     |     |
|---|---|-----|-----|
| d. Derive the performance equation for Mix flow reactor | 5 | CO3 | PO2 |
|---|---|-----|-----|

- |                                     |    |     |     |
|-------------------------------------|----|-----|-----|
| 6.a. For enzyme catalyzed reaction, | 10 | CO4 | PO2 |
|-------------------------------------|----|-----|-----|

Derive Michaelis - Menten equation and show the importance of the rate expression when substrate concentration is high.

(OR)

- |  |    |     |     |
|--|----|-----|-----|
| b. Derive a rate expression for reversible non-competitive inhibition and show the line weaver Burk plot for this. | 10 | CO4 | PO2 |
|--|----|-----|-----|

--- End of Paper ---
