PART – D: (Long Answer Questions)   **(10 x 1 = 10 Marks)**

Answer *ANY ONE* question   Marks

   4.a. Define communication and its types.   10

                              (OR)

   b. **Read the passage given below and make notes on it.**   10
       Artificial intelligence (AI) is making a difference to how legal work is done, but it isn't
       the threat it is made out to be. AI is making impressive progress and shaking up things
       all over the world today. The assumption that advancements in technology and artificial
       intelligence will render any profession defunct is just that, an assumption and a false
       one. The only purpose this assumption serves is creating mass panic and hostility
       towards embracing technology that is meant to make our lives easier.

       Introducing AI to this profession will primarily be for the purpose of automating
       mundane, tedious tasks that require negligible human intelligence. The kind of artificial
       intelligence that is employed by industries in the current scene, when extended to the
       law will enable quicker services at a lower price. AI is meant to automate a number of
       tasks that take up precious working hours lawyers could be devoted to tasks that require
       discerning, empathy, and trust- qualities that cannot be replicated by even the most
       sophisticated form of AI. The legal profession is one of the oldest professions in the
       world. Thriving over 1000 years; trust, judgement, and diligence are the pillars of this
       profession. The most important pillar is the relationship of trust between a lawyer and
       clients, which can only be achieved through human connection and interaction.

       While artificial intelligence can be useful in scanning and organizing documents
       pertaining to a case, it cannot perform higher-level tasks such as sharp decisionmaking,
       relationship-building with valuable clients and writing legal briefs, advising clients, and
       appearing in court. These are over and above the realm of computerization. Lawyers are
       even required to thoroughly know the opposing stand and supporting legal arguments
       they can expect to prepare a watertight defence strategy. AI, software that operates on
       natural language enables electronic discovery of information relevant to a case, contract
       reviews, and automation generation of legal documents.

                              ---End of Paper ---
